

STOP THAT BOAT!

AUTOTETHER WIRELESS LANYARD | \$249

Added safety with no strings attached. This ignition kill-switch device works with the same dependability as hardwired kill switches without requiring the captain to be tethered to the boat. The wireless receiver clips in at the ignition switch, and the transmitter is worn on the boat operator's belt. Should the operator fall overboard, the signal between transmitter and receiver is lost – because radio waves don't transmit through water – and the Autotether immediately shuts down the boat's engine.

Additional transmitters (sensors) are available for up to three passengers – or pets. If one of these units hits the water, a sound alarm will alert the driver and the passenger can kill the engine with the push of a button. No extra cords or wiring is necessary for installation.

ARMOR FOR YOUR EYES

WILEY X EYEWEAR | \$130

Finally – a pair of glasses that can withstand the elements and provide optimum vision. The Wiley X Airborne glasses paired with Wiley's Facial Cavity Seal create a virtual bunker for your eyes. The sunglasses paired with the breathable foam Facial Cavity Seal create climate-controlled insulation that protects your eyes from wind, debris and precipitation – all while giving boaters a full field of view.

The Selenite lenses are shatterproof and scratch-resistant, and also offer protection against harmful UV rays. Airborne sunglasses are available in smoke-black lenses with black frames, smoke-green lenses with black frames and bronze-brown lenses with root beer frames.

POWER ADAPTER MARINCO CORD-SET ADAPTER | \$49.99

Save some clearance room in those tight spaces with Marincos 30-amp right-angle adapter. The adapter easily transforms any straight connection to a cleaner-looking right-angle connection. The GripLock handle makes connecting to shore power nearly effortless, even in the dark when it may be hard to line up the blades.

The adapter comes with both the standard threaded ring and the Marincos EasyLock ring that creates a watertight seal. A sealing collar also provides moisture protection between the connector and cordset. The adapter is constructed with marine-grade materials to ensure protection against the elements.

A DAZZLING DISPLAY TELEFLEX GOLD STERLING GAUGES | \$38.99-\$179.99

Form and function come together in Teleflex's new Gold Sterling gauges designed for both elegance and practicality. Compatible with both outboard- and sterndrive-powered boats, each gauge displays the boat's critical information with black and gold graphics on an aluminum dial – all encased in a stainless steel bezel. Blue perimeter lighting accents the gauge during the day and makes the dials easy to read at night.

To improve durability, the gauge is manufactured with scratch-resistant domed glass and treated with a fog-resistant coating. Gauges are available for a range of functions including fuel, water pressure, water temperature, oil pressure, engine trim and voltmeter.
